RECENT POPULATION PROJECTIONS FOR ALASKA

Source	Method	Date Pub- lished	P r o j e c t i o n s		
			1970	1980	2000
U. S. Bureau of the Census /1	To 1980, based on two different levels of fertility (gross reproduction rates) and two different levels of migration; from 1980 to 2000, based on a ratio method which assumes change in proportion of population in each state would be the same as that occurring between 1970 and 1980. This resulted in 4 sets of projections.	1960	252,000 263,000 272,000 283,000	339,000 349,000 384,000 397,000	507,000 517,000 659,000 672,000
Battelle Memorial Institute /2	Based on analysis of probable new employment and population arising from potential resource development.	1961		393,620	
Ivan Bloch /3	Assumes growth to continue at an annual average rate of 6 to 8 percent.	1960		(1975) 750,000	
Benton & Bowles /4	No basis for projection given	1959	(1968) 463,000	(1978) 1,132,000	
Bureau of Land Management /5	No basis for projection given	1961	500,000	1,500,000	(By Year 2012) 5,000,000
State Department of Commerce /6	Straight mathematical projection of past population growth using base periods of 1880-1960 for low and 1920-1960 for high projections.	1961	(Low) 365,000 (High) 550,000	(Low) 650,000 (High) 1,800,000
